Global Research Corps-UNDP workshop
16\textsuperscript{th}-17\textsuperscript{th} January 2006

Prof. P.E. Mugambi
President of the Uganda National Academy of Sciences
1. GRC should seek to establish and develop viable Research Groups in our countries.
2. It is important to note that researchers are at different levels of development, therefore interventions should vary accordingly.
3. Funding should facilitate poorly paid researchers to ensure commitment to research
4. Research should tackle local problems all through to implementation
5. Funding should also focus on improving poor research facilities in universities and research institutions.
6. Global Research Corps should include/invoke nationals in the diaspora
7. Universities, and research institutes should be involved in the GRC initiative in the form of capacity building.
8. Promote local publications (Journals)
9. Research visits abroad to strengthen research expertise in more advanced facilities
10. The Research Corp scheme should be a partnership between the locals and research corps. Include the locals and encourage them to have an input in the structure, content, and priority areas in research, so as to have a collaboration in its true essence with equitable opportunities.
11. Exploit internet services to support research.
12. Research should be relevant and appropriate to the priorities of the communities for whom it is intended.
13. GRC should promote and fund basic research for its strategic importance.
